

DESIGN SERVICES

LUSH media offers a distinctive blend of customized graphic and web design services that will enhance your company's image. Your web site is the public face of your company, and you will be judged by its appearance, content and performance. From a minor redesign to a completely new web site, we can provide the solution that matches your needs.

We can not stress enough that an effective web site is much more involved than just a few pages on the web: pre-design, strategic planning, design, implementation, promotion, maintenance and support. Our team will spend the time to explain, advise and help you at every step, so your site comes out exactly the way you want it.

Any design team can build a site that looks good on the computers in their studio, but LUSH media's focus is on the rest of the web. While one of our primary goals is attractive design, we understand the importance of keeping design in check with the capabilities of the target audience.

We design web sites that look great, make good use of the technologies available, and yet remain compatible with the wide range of browsers used by the internet community today. To achieve this, we design web sites that are fast loading and compatible with all major browsers, thus ensuring the maximum target audience possible. Where an advanced web technology is used, such as Flash, JavaScript and Dynamic HTML, we strive to use it in such a way that does not exclude visitors who are not yet up to date.

The strength of the internet, after all, is the power of universal communication. We see the restrictions imposed by the web as strengths, not weaknesses, challenging us to find new and innovative ways to make friendly, interactive and attractive web sites that people will want to return to again and again.

Your web site is the public face of your company, and you will be judged by its appearance, content and performance. From a minor redesign to a completely new web site, we can provide the solution that matches your needs.
